

LETTER TO EDITORS

Sergey Vlăduț

June 2025

Unfortunately, there is an important gap in the constructions in my paper
"Lattices with exponentially large kissing numbers,"

Moscow Journal of Combinatorics and Number Theory, 2019,8:2, 163-177,
and therefore, the principle results should be considered as not proven.

The gap comes from Construction D given just before Proposition 3.1, p.167,
which in general does not produce a lattice satisfying the inequality of Proposition 3.1 which is tacitly supposed in the paper.
