# COMMENTS ON THE PRECEDING PAPER BY HERZOG AND PIRANIAN

### P. C. ROSENBLOOM

- 1. Our main purpose here is to extract and formulate explicitly the general principle underlying the construction of Herzog and Piranian. The results in this note are implicitly contained in the computations on pp. 535 and 537 of their paper, and the full credit belongs to them.
  - 2. We use the notation  $M(r, f) = \max |f(z)|$  on |z| = r.

THEOREM 1. Let  $f_n$  be analytic in  $|z| \le 1$ , let  $r_n$  be increasing,  $0 < r_n \longrightarrow 1$  as  $n \longrightarrow \infty$ , let  $a_n > 0$ ,

$$A = \sum_{n=1}^{\infty} a_n < + \infty,$$

let  $R(t) = \sum a_k$  over all k such that  $r_k \geq t$ , and let  $g = \sum_{n=1}^{\infty} f_n$ . If

(a) 
$$M(r_n, f_{n+1}) \leq a_n$$
,

and

(b) 
$$M(1, f_n') \leq a_n (1 - r_n)^{-1}$$

for all n, then g is analytic in |z| < 1, and for  $|z| \le 1$ ,  $r_{n-1} \le r \le r_n$ , we have

(1) 
$$\left| g(rz) - \sum_{1}^{n-1} f_k(z) - f_n(rz) \right| \leq A(1-r)^{\frac{1}{2}} + R(1-(1-r)^{\frac{1}{2}}),$$

(2) 
$$|g(r_n z) - g(r_{n-1}z) - f_n(z)| \le 2A(1 - r_{n-1})^{\frac{1}{2}}$$

+ 
$$2R(1-(1-r_{n-1})^{\frac{1}{2}})+R(r_n).$$

Proof. We have

$$|f_k(rz) - f_k(z)| \le a_k (1-r)/(1-r_k)$$

$$\le \begin{cases} a_k (1-r)^{\frac{1}{2}} & \text{if } r_k \le 1 - (1-r)^{\frac{1}{2}} \\ a_k & \text{if } k < n-1, \end{cases}$$

and  $|f_k(rz)| \leq a_{k-1}$  for k > n. Inequality (1) now follows from

$$g(rz) - \sum_{k=1}^{n-1} f_k(z) - f_n(rz) = \sum_{k=1}^{n-1} (f_k(rz) - f_k(z)) + \sum_{k=n+1}^{\infty} f_k(rz).$$

We now apply (1) with  $r = r_n$  and  $r = r_{n-1}$  to estimate

$$h(z) = g(r_n z) - g(r_{n-1} z) - f_n(r_n z) + f_n(r_{n-1} z),$$

and obtain (2) from

$$g(r_n z) - g(r_{n-1}z) - f_n(z) = h(z) - f_n(r_{n-1}z) + (f_n(r_n z) - f_n(z)).$$

3. We denote by E(g) the set of radial continuity of g.

COROLLARY 1a. If  $|z_0| = 1$ ,  $\limsup_{n \to \infty} |f_n(z_0)| > 0$ , then  $z_0 \notin E(g)$ .

COROLLARY 1b. If  $|z_0| = 1$ , and  $\lim_{n \to \infty} f_n(rz_0)$  exists as  $r \to 1$  and  $n \to \infty$  simultaneously,  $\frac{1}{r}$  then

$$\lim_{r\to\infty} g(rz_0)$$
 and  $\sum_{n=1}^{\infty} f_n(z_0) = g(z_0)$ 

either both exist or both do not exist. If  $\lim_{n} (rz_0) = 0$ , then

$$\lim_{r \to 1} g(rz_0) = g(z_0)$$

if either exists. Hence if  $M(1,f_n) \longrightarrow 0$  as  $n \longrightarrow \infty$ , then E(g) is the set of convergence of  $\sum_{n=1}^{\infty} f_n(z)$  on |z| = 1.

### 4. We now establish:

<sup>&</sup>lt;sup>1</sup> The weaker condition that  $f_n(rz_0)$  has a limit as  $n \longrightarrow +\infty$  and  $r \longrightarrow 1$  in such a way that  $r_{n-1} \le r \le r_n$  for all n is sufficient for this corollary.

THEOREM 2. If  $F_n$  is analytic in  $|z| \leq 1$ ,  $M(1, F_n) \leq M_n$ ,  $M(1, F_n') \leq M_n$  for all n, and  $a_n > 0$  (all n),  $\sum_{n=1}^{\infty} a_n < +\infty$ , then there exist sequences  $r_n$  and  $k_n$  such that  $f_n(z) = z^{k_n} F_n(z)$  satisfies (a) and (b) of Theorem 1.

*Proof.* Let  $k_1=0$  and suppose that  $k_2, \dots, k_n, r_1, \dots, r_{n-1}$  are defined. Then (b) is satisfied if

$$r_n \ge 1 - \frac{a_n}{M_n(k_n+1)}.$$

Choose any  $r_n$  such that

$$1 > r_n > \max \left[ r_{n-1}, 1 - \frac{a_n}{M_n(k_n+1)} \right].$$

Then (a) is satisfied if

$$k_{n+1} \geq \frac{\log \left(a_n/M_{n+1}\right)}{\log r_n}.$$

### 5. As a consequence, we have:

COROLLARY 2a. If

$$\limsup_{n\to\infty} |\alpha_n| > 0, \limsup_{n\to\infty} k_n^{-1} \log |\alpha_n| = 0,$$

$$a_n > 0$$
,  $\sum a_n < +\infty$ , and  $\frac{k_{n+1}}{k_n} \ge \frac{|\alpha_n|}{a_n} \log \frac{|\alpha_{n+1}|}{a_n}$ 

for all n, then E(g) = 0, where  $g(z) = \sum \alpha_n z^{k_n}$ .

If  $\alpha_n = O(1)$ ,  $\limsup_{n \to \infty} |\alpha_n| > 0$ ,  $k_n$  increasing, and

$$\sum \frac{k_n}{k_{n+1}} \log \frac{k_{n+1}}{k_n} < + \infty,$$

then E(g) = 0.

COROLLARY 2b. Suppose that f is analytic in the circle  $|z| \le 1$ , f(1) = 1,  $M(1, f') \le 1$ , and that  $a_n > 0$  (all n),

$$\sum_{n=1}^{\infty} a_n < + \infty.$$

Let

$$g(z) = \sum_{n=1}^{\infty} z^{k_n} f(ze^{-i\theta_n}).$$

lf

$$\lim_{n\to\infty}\inf\left[\frac{k_{n+1}}{k_n}+3\frac{\log a_n}{a_n}\right]>0,$$

then  $z = e^{i\theta} \notin E(g)$  if  $|\theta - \theta_n| \le (\pi/3) - h$ ,  $0 < h < \pi/3$ , for infinitely many n. In particular, E(g) = 0 if the set  $\{\theta_n\}$  is dense in the interval  $[0, 2\pi]$ .

- 6. The discussion of  $C_n(z)$  on pp. 534, 535 of the preceding paper shows that they are constructed essentially in accordance with Theorem 2 above. The gap theorem in Corollary 2a is very crude, and can certainly be improved. The high-indices theorem of Hardy and Littlewood and Tauberian methods (see [2] and [3]) yield much sharper results.
- 7. The construction on p. 537 of Herzog and Piranian can also be carried out as follows.

Lemma. If A and B are disjoint closed sets in the plane and B is bounded and has a simply connected compliment, and  $\epsilon > 0$ , then there is a polynomial P(z) such that  $|P(z)| \le \epsilon$  on B and  $|P(z)| \ge 1$  on A.

*Proof.* Let  $T_n(z)$  be the Chebyshev polynomial of degree n for B; that is,  $T_n$  is the polynomial of degree n with highest coefficient 1 whose maximum modulus on B is the least possible. Then  $T_n(z)^{1/n} \longrightarrow \phi(z)$  in the exterior of B, where  $\phi(z)$  is the function which maps the exterior of B onto the exterior of a circle |w| > c and whose Taylor expansion at  $\infty$  begins thus:  $\phi(z) = z + \cdots$ . Let c < C < R be such that  $|\phi(z)| \ge R + \epsilon$  on A. Then there is an n such that

$$\mid T_n(z) \mid^{1/n} \geq R$$
 on  $A$  and  $\mid T_n(z) \mid^{1/n} \leq C$  on  $B$ .

If n is chosen such that  $\epsilon(R/C)^n \geq 1$ , then  $R^{-n}$   $T_n$  is a polynomial with the desired properties.

There are, of course, many other ways of constructing such a polynomial.

Now in the construction on p. 537, take a convergent double series  $\sum a_{kh}$  with  $a_{kh} > C$ . Choose  $A = I_{kh}$  and let B be the sector  $z = re^{i\theta}$  with  $0 \le r \le 1$  and  $\theta$  in the closed interval complimentary to  $I_{kh}$  and its two adjacent intervals in  $G_k$ . Let  $P_{kh}$  be a polynomial such that  $|P_{kh}(z)| \ge 1$  on  $I_{kh}$  and  $|P_{kh}(z)| \le a_{kh}$  on B. Arrange the pairs (k,h) in a sequence by the diagonal process, and apply Theorem 2, then Theorem 1.

8. The polynomials  $C_n$  used by Herzog and Piranian are of the desired type for the sets A and B considered in the preceding paragraph. They provide a simple explicit construction and enjoy other interesting properties which seem to be useful in a number of problems. The fact that they are small on the whole set B above follows from the following remark which is surely known:

If

$$f(z) = \sum_{n=0}^{\infty} a_n z^n$$
 and  $s_n(z) = \sum_{k=0}^{n} a_k z^k$ ,

and  $0 \le r \le 1$ ,  $|z| \le 1$ , then  $|f(rz)| \le \sup_n |s_n(z)|$ .

This is a trivial consequence of the identity  $f(rz) = O(1-r) \sum_{0}^{\infty} r^{n} s_{n}(z)$ .

Mathematical papers intended for publication in the Pacific Journal of Mathematics should be typewritten (double spaced), and the author should keep a complete copy. Manuscripts may be sent to any of the editors. Manuscripts intended for the outgoing editors should be sent to their successors. All other communications to the editors should be addressed to the managing editor, E.G. Straus, at the University of California Los Angeles 24, California.

50 reprints of each article are furnished free of charge; additional copies may be obtained at cost in multiples of 50.

The Pacific Journal of Mathematics is published quarterly, in March, June, September, and December. The price per volume (4 numbers) is \$12.00; single issues, \$3.50; back numbers (Volumes 1,2,3) are available at \$2.50 per copy. Special price to individual faculty members of supporting institutions and to individual members of the American Mathematical Society: \$4.00 per volume; single issues, \$1.25.

Subscriptions, orders for back numbers, and changes of address should be sent to the publishers, University of California Press, Berkeley 4, California.

Printed at Ann Arbor, Michigan. Entered as second class matter at the Post Office, Berkeley, California.
