SIMPLIFIED PROOFS OF "SOME TAUBERIAN THEOREMS" OF JAKIMOVSKI: ADDENDUM AND CORRIGENDUM

C. T. RAJAGOPAL

Dr. B. Kuttner has kindly drawn my attention to a paper by F. Hausdorff, *Die Äquivalenz der Hölderschen und Cesaròschen Grenzwerte negativer Ordnung*, Math. Z., 31 (1930), 186–196, which contains a generalization of Jakimovski's fundamental theorem discussed in § 2 of my paper (this volume, pp. 955–960) and Szász's product-theorem referred to in § 3 of my paper, under numbers VI and III respectively in the list of numbered results I–VIII. There is a close connection between Hausdorff's paper and mine, as shown, for instance, by a comparison of Lemmas 1, 3 in the latter with the interpretation of Γ_{-k} and the result numbered VII in the former (pp. 195–6). It is unfortunate that I should have been ignorant of Hausdorff's paper and that the paper should have escaped mention in the lists of references provided by such works as G. H. Hardy's *Divergent series* and O. Szász's *Introduction to the theory of divergent series*.

Dr. Kuttner has also been good enough to call my attention to the fact that my step numbered (6) in p. 958 is not a valid deduction from my Lemma 2. For the convenience of the reader, I add that my incorrect argument may be replaced by the following, after the deletion of the last two lines of p. 957 and the lines 1, 2, 6, 7, 8, 9 of p. 958.

Since, if $k=1$ we infer at once from Lemma 2 that $s_n=o(1)$, we suppose that $k \geq 2$ and reduce this case to the case $k=1$. When $k \geq 2$, (7) in p. 958 shows that

$$\sum_{r=0}^{\infty} \Delta^k s_{r-k} x^r = o(1), \quad x \rightarrow 1-0,$$

that is, that the series $\sum \Delta^k s_{r-k}$ is summable (A) to 0. In this series, the n th term $\Delta^k s_{n-k} = o(n^{-k})$, $n \rightarrow \infty$, by hypothesis, so that the series is convergent and necessarily to 0. Therefore

$$\Delta^{k-1} s_{n-k+1} = - \sum_{r=0}^n \Delta^k s_{r-k} = \sum_{r=n+1}^{\infty} \Delta^k s_{r-k} = \sum_{r=n+1}^{\infty} o(r^{-k}) = o(n^{-k+1}), \quad n \rightarrow \infty.$$

By repetitions of this argument (if necessary), we reduce $k \dots$

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be typewritten (double spaced), and the author should keep a complete copy. Manuscripts may be sent to any of the editors. All other communications to the editors should be addressed to the managing editor, E. G. Straus at the University of California, Los Angeles 24, California.

50 reprints per author of each article are furnished free of charge; additional copies may be obtained at cost in multiples of 50.

The *Pacific Journal of Mathematics* is published quarterly, in March, June, September, and December. The price per volume (4 numbers) is \$12.00; single issues, \$3.50. Back numbers are available. Special price to individual faculty members of supporting institutions and to individual members of the American Mathematical Society: \$4.00 per volume; single issues, \$1.25.

Subscriptions, orders for back numbers, and changes of address should be sent to Pacific Journal of Mathematics, 2120 Oxford Street, Berkeley 4, California.

Printed at Kokusai Bunken Insatsusha (International Academic Printing Co., Ltd.), No. 10, 1-chome, Fujimi-cho, Chiyoda-ku, Tokyo, Japan.
