INTEGRABILITY OF TRIGONOMETRIC SERIES. II

MASAKO IZUMI AND SHIN-ICHI IZUMI

INTEGRABILITY OF TRIGONOMETRIC SERIES II

MASAKO IZUMI AND SHIN-ICHI IZUMI

There are proved theorems of the following type. Let $0 < r < 1$ and $g(t) \sim \sum_{n=1}^{\infty} b_n \sin nt$ and suppose $\int_0^n g(t) |t-u|^{-r} dt \leq A$ for all $u > 0$. Then $\sum_{n=1}^{\infty} |b_n| n^{r-1} < \infty$.

1. Sz.-Nagy [7] (cf. [1]) has proved the following

THEOREM 1. Let $0 < r < 1$ and $g(t) \sim \sum_{n=1}^{\infty} b_n \sin nt$. If $g \downarrow$ and is bounded below, then

$$(1) \quad t^{-r} g(t) \in L(0, \pi) \iff \sum_{n=1}^{\infty} |b_n| / n^{1-r} < \infty .$$

The same holds for even functions.

In this theorem, the assumption $g \downarrow$ cannot be replaced by $g \geqq 0$, that is,

THEOREM 2. ([1]), [4]) Let $0 < r < 1$, then there is an odd function

$$g \sim \sum_{n=1}^{\infty} b_n \sin nt$$

such that

- (i) $g \geqq 0$ on $(0, \pi)$,
- (ii) $t^{-r} g(t) \in L(0, \pi)$,

but

$$(iii) \quad \sum_{n=1}^{\infty} |b_n| / n^{1-r} = \infty .$$

The same holds for even functions.

Sunouchi [6], Edmonds [3] and Boas [2] (cf. [1]) proved that

THEOREM 3. Let $0 < r < 1$ and $b_n \downarrow 0$. Then the function g defined by $g(t) = \sum_{n=1}^{\infty} b_n \sin nt$, satisfies the relation (1). The same holds for even functions.

The monotonicity of (b_n) in this theorem cannot be replaced by positivity, that is,

THEOREM 4. ([1], [4]) Let $0 < r < 1$, then there is an odd function

$$g(t) \sim \sum_{n=1}^{\infty} b_n \sin nt$$

such that

- (i) $b_n \geq 0$ (or $b_n \rightarrow 0$ and $\sum |\Delta b_n| < \infty$),
- (ii) $\sum_{n=1}^{\infty} |b_n|/n^{1-r} < \infty$,

but

- (iii) $t^{-r}g(t) \notin L(0, \pi)$.

The same holds for even functions.

We shall prove the following theorems.

THEOREM 5. Let $0 < r < 1$ and $g(t) \sim \sum_{n=1}^{\infty} b_n \sin nt$, then

$$(2) \quad \int_0^{\pi} \frac{g(t)}{|t-u|^r} dt \leq A \text{ for all } u > 0 \implies \sum_{n=1}^{\infty} |b_n|/n^{1-r} < \infty .$$

The same holds for even functions.

THEOREM 6. Let $0 < r < 1$ and $g(t) \sim \sum_{n=1}^{\infty} b_n \sin nt$. Then

$$(3) \quad \sum_{n=1}^{\infty} n^r |\Delta b_n| < \infty \implies t^{-r}g(t) \in L(0, \pi) .$$

The same holds for even functions.

By Theorem 4, the converse implication of (2) does not hold. We have proved that [5], for $0 < r < 1$,

$$\sum_{n=1}^{\infty} |b_n|/n^{1-r} < \infty \implies \exists \int_{+0}^{\pi} g(t)t^{-r}dt .$$

The left side of (2) is satisfied when

- (i) $g \downarrow$ on $(0, \delta)$ and bounded on (δ, π) and $t^{-r}g(t) \in L(0, \pi)$, or
- (ii) there is an odd function g_1 such that

$$|g(t)| \leq A g_1(t) \text{ on } (0, \pi)$$

and g_1 satisfies the condition in (i), or

(iii) there is a finite set of points (x_1, x_2, \dots, x_n) on $(0, \pi)$ such that the odd function g becomes monotonically infinite on one side or both side of each x_i and is bounded outside of each neighbourhood of x_i and

$$|g(t)|/|t-x_i|^r \in L(0, \pi) \quad (i = 1, 2, \dots, n) .$$

(i) shows that Theorem 5 contains the $\sum \rightarrow$ part of Theorem 1 as a particular case. (ii) and (iii) are generalizations of (i).

If $b_n \downarrow 0$, the right side of (1) is equivalent to the left side of (3), and then the $\sum \rightarrow$ part of Theorem 3 is a particular case of Theorem 6.

2. *Proof of Theorem 5.* We consider the function

$$(3) \quad h(t) = \sum_{n=2}^{\infty} (-1)^n \sin nt/n^{1-r},$$

then

$$k(t) = (g*h)(t) = \frac{2}{\pi} \int_0^\pi g(u)h(t+u)du \sim \sum_{n=2}^{\infty} \frac{(-1)^n}{n^{1-r}} b_n \cos nt.$$

If $k \in \text{Lip } 1$, then its Fourier series converges absolutely by Bernstein's theorem, which gives the conclusion of the theorem. Therefore it is sufficient to prove that

$$(4) \quad |k(t+v) - k(t)| \leq Av \text{ for small } v > 0 \text{ and } 0 < t < \pi.$$

Now,

$$(5) \quad \begin{aligned} k(t+v) - k(t) &= \frac{2}{\pi} \int_0^\pi g(u)(h(t+u+v) - h(t+u))du \\ &= \frac{2}{\pi} \int_0^\pi g(u-t)(h(u+v) - h(u))du, \end{aligned}$$

where, by (3),

$$(6) \quad \begin{aligned} h(u) &= \sum_{n=1}^{\infty} \left(\frac{\sin 2nu}{(2n)^{1-r}} - \frac{\sin (2n+1)u}{(2n+1)^{1-r}} \right) \\ &= \sum_{n=1}^{\infty} \left(\frac{1}{(2n)^{1-r}} - \frac{1}{(2n+1)^{1-r}} \right) \sin 2nu \\ &\quad + (1 - \cos u) \sum_{n=1}^{\infty} \frac{\sin 2nu}{(2n+1)^{1-r}} - \sin u \sum_{n=1}^{\infty} \frac{\cos 2nu}{(2n+1)^{1-r}} \\ &= P(u) + Q(u) - R(u). \end{aligned}$$

We write

$$p(u) = \frac{1}{(2u)^{1-r}} - \frac{1}{(2u+1)^{1-r}} \text{ for } u > 0$$

and

$$p(n) = p_n (n = 1, 2, \dots),$$

then

$$\begin{aligned} P(u) &= \sum_{n=1}^{\infty} p_n \sin 2nu \\ &= \int_{1/2}^{\infty} p(w) \sin 2uw dw + \int_{1/2}^{\infty} p(w) \sin 2uw dj(w) \end{aligned}$$

where

$$j(w) = -w + [w] + \frac{1}{2} \sim \frac{1}{\pi} \sum_{m=1}^{\infty} \frac{\sin 2\pi mw}{m}$$

and then

$$\begin{aligned} P(u+v) - P(u) &= \left\{ \int_{1/2}^{\infty} p(w) \sin 2(u+v)w dw - \int_{1/2}^{\infty} p(w) \sin 2uw dw \right\} \\ &\quad + \left\{ \int_{1/2}^{\infty} p(w) \sin 2(u+v)w dj(w) - \int_{1/2}^{\infty} p(w) \sin 2uw dj(w) \right\} \\ &= S_1 + S_2. \end{aligned}$$

We shall first show that $S_1 = O(v/u^r)$.

$$\begin{aligned} S_1 &= \frac{1}{2(u+v)} \int_{u+v}^{\infty} p\left(\frac{x}{2(u+v)}\right) \sin x dx - \frac{1}{2u} \int_u^{\infty} p\left(\frac{x}{2u}\right) \sin x dx \\ &= \frac{1}{2} \int_{u+v}^{\infty} \left(\frac{1}{u+v} p\left(\frac{x}{2(u+v)}\right) - \frac{1}{u} p\left(\frac{x}{2u}\right) \right) \sin x dx \\ &\quad - \frac{1}{2u} \int_u^{u+v} p\left(\frac{x}{2u}\right) \sin x dx \\ &= \frac{1}{2} \int_{u+v}^{\infty} \left\{ \left(\frac{1}{(u+v)^r} - \frac{1}{u^r} \right) \frac{1}{x^{1-r}} \right. \\ &\quad \left. - \left(\frac{1}{(u+v)^r(x+u+v)^{1-r}} - \frac{1}{u^r(x+u)^{1-r}} \right) \right\} \sin x dx \\ (7) \quad &\quad - \frac{1}{2u^r} \int_u^{u+v} \left(\frac{1}{x^{1-r}} - \frac{1}{(x+u)^{1-r}} \right) \sin x dx \\ &= \frac{1}{2} \left(\frac{1}{(u+v)^r} - \frac{1}{u^r} \right) \int_{u+v}^{\infty} \left(\frac{1}{x^{1-r}} - \frac{1}{(x+u)^{1-r}} \right) \sin x dx \\ &\quad + \frac{1}{2(u+v)^r} \int_{u+v}^{\infty} \left(\frac{1}{(x+u)^{1-r}} - \frac{1}{(x+u+v)^{1-r}} \right) \sin x dx \\ &\quad - \frac{1}{2u^r} \int_u^{u+v} \left(\frac{1}{x^{1-r}} - \frac{1}{(x+u)^{1-r}} \right) \sin x dx \\ &= O(v/u^r), \end{aligned}$$

since

$$\begin{aligned} &\int_{u+v}^{\infty} \left(\frac{1}{x^{1-r}} - \frac{1}{(x+u)^{1-r}} \right) \sin x dx \\ &= (1 - \cos u) \int_{2u+v}^{\infty} \frac{\sin x}{x^{1-r}} dx + \int_{2u+v}^{\infty} \frac{\sin u \cdot \cos x}{x^{1-r}} dx \\ &\quad + \int_{u+v}^{2u+v} \frac{\sin x}{x^{1-r}} dx \end{aligned}$$

and similarly for the integral of the second term of the right side of (7). The estimation of S_2 is a little more complicated. By integration by parts,

$$\begin{aligned}
S_2 &= \int_{1/2}^{\infty} p(w) \sin 2(u+v)w dj(w) - \int_{1/2}^{\infty} p(w) \sin 2uw dj(w) \\
&= - \int_{1/2}^{\infty} p'(w) \sin 2(u+v)w j(w) dw \\
&\quad - 2(u+v) \int_{1/2}^{\infty} p(w) \cos 2(u+v)w j(w) dw \\
&\quad + \int_{1/2}^{\infty} p'(w) \sin 2uw j(w) dw \\
&\quad + 2u \int_{1/2}^{\infty} p(w) \cos 2uw j(w) dw,
\end{aligned}$$

and using the Fourier expansion of $j(w)$, we get

$$\begin{aligned}
S_2 &= - \frac{1}{\pi} \sum_{m=1}^{\infty} \frac{1}{m} \left\{ \int_{1/2}^{\infty} p'(w) (\sin 2(u+v)w \cdot \sin 2\pi mw \right. \\
&\quad \left. - \sin 2uw \cdot \sin 2\pi mw) dw \right. \\
&\quad \left. - 2 \int_{1/2}^{\infty} p(w) ((u+v) \cos 2(u+v)w \cdot \sin 2\pi mw \right. \\
&\quad \left. - u \cos 2uw \sin 2\pi mw) dw \right\} \\
&= \frac{1}{\pi} \sum_{m=1}^{\infty} \frac{1}{m} \{ 2(1-r) T_1 + 2T_2 \}.
\end{aligned}$$

In order to get $S_2 = O(v)$, it is sufficient to prove that T_1 and T_2 are of order $O(v/m)$. Now, for $m \geq 3$, we have

$$\begin{aligned}
T_1 &= \int_{1/2}^{\infty} \left(\frac{1}{(2w)^{2-r}} - \frac{1}{(2w+1)^{2-r}} \right) \\
&\quad \cdot \{ (\cos 2(m\pi - u - v)w - \cos 2(m\pi - u)w) \\
&\quad - (\cos 2(m\pi + u + v)w - \cos (m\pi + u)w) \} dw \\
&= \frac{1}{2} \left\{ \int_{m\pi-u-v}^{\infty} \left(\left(\frac{m\pi - u - v}{x} \right)^{2-r} - \left(\frac{m\pi - u - v}{x + m\pi - u - v} \right)^{2-r} \right) \frac{\cos x}{m\pi - u - v} dx \right. \\
&\quad \left. - \int_{m\pi-u}^{\infty} \left(\left(\frac{m\pi - u}{x} \right)^{2-r} - \left(\frac{m\pi - u}{x + m\pi - u} \right)^{2-r} \right) \frac{\cos x}{m\pi - u} dx \right\} \\
&- \frac{1}{2} \left\{ \int_{m\pi+u+v}^{\infty} \left(\left(\frac{m\pi + u + v}{x} \right)^{2-r} - \left(\frac{m\pi + u + v}{x + m\pi + u + v} \right)^{2-r} \right) \frac{\cos x}{m\pi + u + v} dx \right. \\
&\quad \left. - \int_{m\pi+u}^{\infty} \left(\left(\frac{m\pi + u}{x} \right)^{2-r} - \left(\frac{m\pi + u}{x + m\pi + u} \right)^{2-r} \right) \frac{\cos x}{m\pi + u} dx \right\} \\
&= \frac{1}{2} \left\{ \int_{m\pi-u}^{\infty} \left(\frac{(m\pi - u - v)^{1-r}}{x^{2-r}} - \frac{(m\pi - u)^{1-r}}{x^{2-r}} \right. \right. \\
&\quad \left. \left. - \frac{(m\pi - u - v)^{1-r}}{(x + m\pi - u - v)^{2-r}} + \frac{(m\pi - u)^{1-r}}{(x + m\pi - u)^{2-r}} \right) \cos x dx + O(v/m) \right\} \\
&\quad - \frac{1}{2} \{ \text{similar terms} \} \\
&= O(v/m)
\end{aligned}$$

$$\begin{aligned}
T_2 &= \int_{1/2}^{\infty} p(w) \{(u+v)(\sin 2(m\pi+u+v)w + \sin 2(m\pi-u-v)w) \\
&\quad - u(\sin 2(m\pi+u)w + \sin 2(m\pi-u)w)\} dw \\
&= \frac{1}{2} \left\{ (u+v) \int_{m\pi+u+v}^{\infty} \left(\left(\frac{m\pi+u+v}{x} \right)^{1-r} \right. \right. \\
&\quad \left. \left. - \left(\frac{m\pi+u+v}{x+m\pi+u+v} \right)^{1-r} \right) \frac{\sin x}{m\pi+u+v} dx \right. \\
&\quad \left. - u \int_{m\pi+u}^{\infty} \left(\left(\frac{m\pi+u}{x} \right)^{1-r} - \left(\frac{m\pi+u}{x+m\pi+u} \right)^{1/r} \right) \frac{\sin x}{m\pi+u} dx \right\} \\
&\quad + \frac{1}{2} \{\text{similar terms}\} \\
&= O(v/m).
\end{aligned}$$

When $m = 1$ or 2 , we get easily

$$|T_1| \leq A \int_{1/2}^{\infty} \frac{v}{w^{2-r}} dw \leq Av, |T_2| \leq Av.$$

Thus we have proved $T_1 + T_2 = O(v/m)$ for all m , and then $S_2 = O(v)$. Collecting the above estimates, we get

$$(8) \quad \int_0^{\pi} |g(u-t)| |P(u+v) - P(u)| du \leq Av \int_0^{\pi} |g(u-t)| u^{-r} du \leq Av.$$

Now, by (6),

$$\begin{aligned}
Q(u+v) - Q(u) &= (1 - \cos(u+v)) \sum_{n=1}^{\infty} \frac{\sin 2n(u+v)}{(2n+1)^{1-r}} \\
&\quad - (1 - \cos u) \sum_{n=1}^{\infty} \frac{\sin 2nu}{(2n+1)^{1-r}} \\
&= (\cos u - \cos(u+v)) \sum_{n=1}^{\infty} \frac{\sin 2n(u+v)}{(2n+1)^{1-r}} \\
&\quad + (1 - \cos u) \left(\sum_{n=1}^{\infty} \frac{\sin 2n(u+v)}{(2n+1)^{1-r}} - \sum_{n=1}^{\infty} \frac{\sin 2nu}{(2n+1)^{1-r}} \right) \\
&= U + (1 - \cos u) V
\end{aligned}$$

where

$$|U| \leq v(u+v) \left| \sum_{n=1}^{\infty} \frac{1}{(2n+1)^{1-r}} \tilde{D}_n(2u+v) \right| \leq Av,$$

\tilde{D}_n being the n th conjugate Dirichlet kernel, and

$$\begin{aligned}
V &= \left\{ \int_{1/2}^{\infty} \frac{\sin 2(u+v)w}{(2w+1)^{1-r}} dw - \int_{1/2}^{\infty} \frac{\sin 2uw}{(2w+1)^{1-r}} dw \right\} \\
&\quad + \left\{ \int_{1/2}^{\infty} \frac{\sin 2(u+v)w}{(2w+1)^{1-r}} dj(w) - \int_{1/2}^{\infty} \frac{\sin 2uw}{(2w+1)^{1-r}} dj(w) \right\} \\
&= V_1 + V_2.
\end{aligned}$$

It is sufficient to prove that $(1 - \cos u)V = O(v)$. Proceeding as for S_1 and S_2 , we get

$$\begin{aligned} V_1 &= \frac{1}{2(u+v)^r} \int_{u+v}^{\infty} \frac{\sin x}{(x+u+v)^{1-r}} dx - \frac{1}{2u^r} \int_u^{\infty} \frac{\sin x}{(x+u)^{1-r}} dx \\ &= O(v/u) \end{aligned}$$

and

$$V_2 = O(v).$$

Therefore

$$Q(u+v) - Q(u) = O(v),$$

and

$$(9) \quad \int_0^{\pi} |g(u-t)| |Q(u+v) - Q(u)| du \leq Av \int_0^{\pi} |g(u)| du \leq Av.$$

Finally we shall estimate $R(u+v) - R(u)$. By the definition (6),

$$\begin{aligned} R(u) &= \sin u \sum_{n=1}^{\infty} \frac{\cos 2nu}{(2n+1)^{1-r}} \\ &= \sin u \int_{1/2}^{\infty} \frac{\cos 2uw}{(2w+1)^{1-r}} dw + \sin u \int_{1/2}^{\infty} \frac{\cos 2uw}{(2w+1)^{1-r}} dj(w) \end{aligned}$$

and

$$\begin{aligned} R(u+v) - R(u) &= (\sin(u+v) - \sin u) \int_{1/2}^{\infty} \frac{\cos 2uw}{(2w+1)^{1-r}} dm \\ &\quad + \sin(u+v) \int_{1/2}^{\infty} \frac{\cos 2(u+v)w - \cos 2uw}{(2w+1)^{1-r}} dw \\ &\quad + \left\{ \sin(u+v) \int_{1/2}^{\infty} \frac{\cos 2(u+v)w}{(2w+1)^{1-r}} dj(w) \right. \\ &\quad \left. - \sin u \int_{1/2}^{\infty} \frac{(2w+1)^{1-r}}{\cos 2uw} dj(w) \right\} \\ &= W_1 + W_2 + W_3 \end{aligned}$$

where

$$\begin{aligned} |W_1| &\leq A \frac{v}{u^r} \left| \int_u^{\infty} \frac{\cos x}{(x+u)^{1-r}} dx \right| \leq A \frac{v}{u^r}, \\ |W_2| &= \left| \frac{\sin(u+v)}{(u+v)^r} \int_{u+v}^{\infty} \frac{\cos x}{(x+u+v)^{1-r}} dx - \frac{\sin(u+v)}{u^r} \int_u^{\infty} \frac{\cos x}{(x+u)^{1-r}} dx \right| \\ &= \left| \frac{\sin(u+v)}{(u+v)^r} \int_{u+v}^{\infty} \left(\frac{1}{(x+u+v)^{1-r}} - \frac{1}{(x+u)^{1-r}} \right) \cos x dx \right. \\ &\quad \left. + \left(\frac{1}{u^r} - \frac{1}{(u+v)^r} \right) \sin(u+v) \int_{u+v}^{\infty} \frac{\cos x}{(x+u)^{1-r}} dx \right| \end{aligned}$$

$$\begin{aligned}
& - \frac{\sin(u+v)}{u^r} \int_u^{u+v} \frac{\cos x}{(x+u)^{1-r}} dx \Big| \\
& \leq A(u+v)^{1-r} \int_{u+v}^{5\pi/2} \frac{v}{(x+u)^{2-r}} dx + A \frac{v(u+v)}{u^{1+r}} \left| \int_{u+v}^{\infty} \frac{\cos x}{(x+u)^{1-r}} dx \right| \\
& \quad + A \frac{u+v}{u} \int_u^{u+v} dx \\
& \leq Av + Av/u^r + Av
\end{aligned}$$

and $W_3 = O(v)$ by an estimation similar to that used for S_2 . Therefore

$$(10) \quad \int_0^\pi |g(u-t)| |R(u+v) - R(u)| du \leq Av.$$

Combining (8), (9) and (10), we get the required result (4). Thus we have completed the proof of Theorem 5.

3. Proof of Theorem 6.

We write $s = [\pi/t]$ and

$$\begin{aligned}
\int_0^\pi t^{-r} |g(t)| dt & \leq \int_0^\pi t^{-r} \left| \sum_{n=1}^s b_n \sin nt \right| dt \\
& \quad + \int_0^\pi t^{-r} \left| \sum_{n=s+1}^{\infty} b_n \sin nt \right| dt = U + V
\end{aligned}$$

where

$$\begin{aligned}
U & \leq \int_0^\pi t^{1-r} \left| \sum_{n=1}^s nb_n \right| dt = \sum_{m=1}^{\infty} \int_{\pi/(m+1)}^{\pi/m} t^{1-r} \left| \sum_{n=1}^m nb_n \right| dt \\
& \leq A \sum_{m=1}^{\infty} \frac{1}{m^{3-r}} \sum_{n=1}^m n |B_n| \leq A \sum_{n=1}^{\infty} |B_n| / n^{1-r} \\
& \leq A \sum_{n=1}^{\infty} n^r |\Delta b_n| < \infty
\end{aligned}$$

and

$$\begin{aligned}
V & = \int_0^\pi t^{-r} | -b_{s+1} \tilde{D}_s(t) + \sum_{n=s+1}^{\infty} \Delta b_n \tilde{D}_n(t) | dt \\
& \leq A \sum_{m=1}^{\infty} \frac{|b_m|}{m^{1-r}} + A \sum_{m=1}^{\infty} \frac{1}{m^{1-r}} \sum_{n=m+1}^{\infty} |\Delta b_n| \\
& \leq A \sum_{n=1}^{\infty} n^r |\Delta b_n| < \infty.
\end{aligned}$$

Thus we have proved $t^{-r}g(t) \in L$ under the assumption

$$\sum_{n=1}^{\infty} n^r |\Delta b_n| < \infty.$$

The Supporting Institutions listed above contribute to the cost of publication of this Journal, but they are not owners or publishers and have no responsibility for its content or policies.

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be in typed form or offset-reproduced, (not dittoed), double spaced with large margins. Underline Greek letters in red, German in green, and script in blue. The first paragraph or two must be capable of being used separately as a synopsis of the entire paper. The editorial "we" must not be used in the synopsis, and items of the bibliography should not be cited there unless absolutely necessary, in which case they must be identified by author and Journal, rather than by item number. Manuscripts, in duplicate if possible, may be sent to any one of the four editors. Please classify according to the scheme of Math. Rev. Index to Vol. 39. All other communications to the editors should be addressed to the managing editor, Richard Arens, University of California, Los Angeles, California, 90024.

50 reprints are provided free for each article; additional copies may be obtained at cost in multiples of 50.

The *Pacific Journal of Mathematics* is published monthly. Effective with Volume 16 the price per volume (3 numbers) is \$8.00; single issues, \$3.00. Special price for current issues to individual faculty members of supporting institutions and to individual members of the American Mathematical Society: \$4.00 per volume; single issues \$1.50. Back numbers are available.

Subscriptions, orders for back numbers, and changes of address should be sent to Pacific Journal of Mathematics, 103 Highland Boulevard, Berkeley, California, 94708.

Vol. 42, No. 2

February, 1972

Stephen Richard Bernfeld, <i>The extendability of solutions of perturbed scalar differential equations</i>	277
James Edwin Brink, <i>Inequalities involving f_p and $f_q^{(n)}$ for f with n zeros</i>	289
Orrin Frink and Robert S. Smith, <i>On the distributivity of the lattice of filters of a groupoid</i>	313
Donald Goldsmith, <i>On the density of certain cohesive basic sequences</i>	323
Charles Lemuel Hagopian, <i>Planar images of decomposable continua</i>	329
W. N. Hudson, <i>A decomposition theorem for biadditive processes</i>	333
W. N. Hudson, <i>Continuity of sample functions of biadditive processes</i>	343
Masako Izumi and Shin-ichi Izumi, <i>Integrability of trigonometric series. II</i>	359
H. M. Ko, <i>Fixed point theorems for point-to-set mappings and the set of fixed points</i>	369
Gregers Louis Krabbe, <i>An algebra of generalized functions on an open interval: two-sided operational calculus</i>	381
Thomas Latimer Kriete, III, <i>Complete non-selfadjointness of almost selfadjoint operators</i>	413
Shiva Narain Lal and Siya Ram, <i>On the absolute Hausdorff summability of a Fourier series</i>	439
Ronald Leslie Lipsman, <i>Representation theory of almost connected groups</i>	453
James R. McLaughlin, <i>Integrated orthonormal series</i>	469
H. Minc, <i>On permanents of circulants</i>	477
Akihiro Okuyama, <i>On a generalization of Σ-spaces</i>	485
Norberto Salinas, <i>Invariant subspaces and operators of class (S)</i>	497
James D. Stafney, <i>The spectrum of certain lower triangular matrices as operators on the l_p spaces</i>	515
Arne Stray, <i>Interpolation by analytic functions</i>	527
Li Pi Su, <i>Rings of analytic functions on any subset of the complex plane</i> ..	535
R. J. Tondra, <i>A property of manifolds compactly equivalent to compact manifolds</i>	539
