CORRECTION TO: “LOCALE GEOMETRY”

B. J. DAY

ERRATA

Correction to

LOCALE GEOMETRY

B. J. DAY

Volume 83 (1979), 333-339

As regards [1] §4 (examples), the categories Lc and Lpc are not correctly defined. The equality on page 334 (line 4) should read $X'(fx, fy) \geq X(x, y)$. The equality on page 334 (line 9) should read $(fx, fy, fz) \geq (x, y, z)$. The equality in axiom C 5 should read:

$$C 5. \quad \sup_w (x, y, w) \wedge (x, z, w) \leq X(y, z) \vee (x, y, z) \vee (x, z, y),$$

with appropriate alterations to the lemmas. With this larger class of geometries the results of the article remain valid. Moreover, the new category inclusion $Lc \subset Lpc$ satisfies the colimit claims of §4 and, consequently, has a right adjoint (whose counit is a set bijection). It can be shown (using the above C 5) that $E_n \cong E_1^n$ in Lc when $L = 2$ and E_n denotes n -dimensional Euclidean space with the usual 2-valued convexity structure.

Correction to

REGULAR FPF RINGS

S. PAGE

Volume 79 (1978), 169-176

In [2] Proposition 3 states that for a left FPF left nonsingular ring any left ideal is essential in a direct summand of the ring. Unfortunately the proof is lacking as was pointed out by E. P. Armendarie. The proof given only works for two sided ideals. The final results of the paper are in fact valid. The arguments of [2] do characterize the left self-injective left FPF regular rings. It is also easy to see (as is pointed out in [2]) that a strongly regular left FPF is left-injective. In [3] it is shown that if R is nonsingular and left FPF, then $Q(R)$, the maximal left quotient ring is also left FPF. So we know the structure of the maximal quotient ring. We will show that, if R is a left EPF regular ring, Proposition 3 does hold.

The Supporting Institutions listed above contribute to the cost of publication of this Journal, but they are not owners or publishers and have no responsibility for its content or policies.

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be in typed form or offset-reproduced, (not dittoed), double spaced with large margins. Please do not use built up fractions in the text of the manuscript. However, you may use them in the displayed equations. Underline Greek letters in red, German in green, and script in blue. The first paragraph or two must be capable of being used separately as a synopsis of the entire paper. Please propose a heading for the odd numbered pages of less than 35 characters. Manuscripts, in triplicate, may be sent to any one of the editors. Please classify according to the scheme of Math. Reviews, Index to Vol. 39. Supply name and address of author to whom proofs should be sent. All other communications should be addressed to the managing editor, or Elaine Barth, University of California, Los Angeles, California, 90024.

50 reprints to each author are provided free for each article, only if page charges have been substantially paid. Additional copies may be obtained at cost in multiples of 50.

The *Pacific Journal of Mathematics* is issued monthly as of January 1966. Regular subscription rate: \$84.00 a year (6 Vols., 12 issues). Special rate: \$42.00 a year to individual members of supporting institutions.

Subscriptions, orders for numbers issued in the last three calendar years, and changes of address should be sent to Pacific Journal of Mathematics, P.O. Box 969, Carmel Valley, CA 93924, U.S.A. Old back numbers obtainable from Kraus Periodicals Co., Route 100, Millwood, NY 10546.
