NOTE ON THE “EVALUATION OF AN INTEGRAL OCCURRING IN SERVOMECHANISM THEORY”

RICHARD HORACE BATTIN
NOTE ON THE "EVALUATION OF AN INTEGRAL OCCURRING IN SERVOMACHANISM THEORY"

R. H. BATTIN

In a recent paper [1] W. A. Mersman considers the evaluation of the integral

\[ l = \frac{1}{2\pi i} \int_{-i\infty}^{i\infty} \frac{g(x)}{h(x)h(-x)} \, dx \]

where \( g(x) \) and \( h(x) \) are polynomials in \( x \) of order \( 2n - 2 \) and \( n \), respectively. Because of the importance of Mersman’s result the present writer wishes to call attention to an alternate and somewhat more direct evaluation of this integral.

We shall utilize Mersman’s notation in the main and begin with his equation (3). By division it is clear that

\[ \frac{h(x)}{x - x_k} = \sum_{j=1}^{n} B_{jk} x^{n-j} \]

where it is important to observe that each of the quantities \( B_{jk} \) will, in general, depend upon \( k \) except the first which is simply \( B_{1k} = a_0 \). Then

\[ \frac{h(x)}{x - x_k} \frac{h(-x) + h(-x_k)}{-x - x_k} h(x) = \sum_{s=0}^{n} \sum_{j=1}^{n} \left[ (-1)^{n-s} + (-1)^{n-j} \right] a_s B_{jk} x^{2n-s-j} \]

\[ = 2(-1)^n \sum_{r=1}^{n} \sum_{j=1}^{2r} (-1)^j a_{2r-j} B_{jk} x^{2(n-r)} \]

In the above expression it is understood that \( a_s = 0 \) for \( s < 0 \) or \( s > n \) and \( B_{jk} = 0 \) for \( j > n \). Mersman’s equation (3) then becomes

\[ \sum_{r=1}^{n} \kappa_r x^{2(n-r)} = 2(-1)^n \sum_{r=1}^{n} x^{2(n-r)} \left\{ \sum_{k=1}^{n} A_k \sum_{j=1}^{2r} (-1)^j a_{2r-j} B_{jk} \right\} \]

Received September 20, 1953.
Pacific J. Math. 5 (1955), 481-482

481
For simplicity we define

\[ F_j = \frac{(-1)^{j+1}}{a_0} \sum_{k=1}^{n} A_k B_{jk} \quad j = 1, 2, \ldots, n \]

so that \( F_1 = I \). There results the following set of \( n \) linear algebraic equations:

\[ a_{2r-1} I + \sum_{j=2}^{2r} a_{2r-j} F_j = (-1)^{n+1} \frac{g_r}{2a_0} \quad r = 1, 2, \ldots, n \]

Using Cramer's rule we may now solve directly for \( I \) to obtain Mersman's result as expressed by his equation (6).

Mathematical papers intended for publication in the Pacific Journal of Mathematics should be typewritten (double spaced), and the author should keep a complete copy. Manuscripts may be sent to any of the editors. Manuscripts intended for the outgoing editors should be sent to their successors. All other communications to the editors should be addressed to the managing editor, Alfred Horn, at the University of California Los Angeles 24, California.

50 reprints of each article are furnished free of charge; additional copies may be obtained at cost in multiples of 50.

The Pacific Journal of Mathematics is published quarterly, in March, June, September, and December. The price per volume (4 numbers) is $12.00; single issues, $3.50; back numbers (Volumes 1, 2, 3) are available at $2.50 per copy. Special price to individual faculty members of supporting institutions and to individual members of the American Mathematical Society: $4.00 per volume; single issues, $1.25.

Subscriptions, orders for back numbers, and changes of address should be sent to the publishers, University of California Press, Berkeley, California.

Printed at Ann Arbor, Michigan. Entered as second class matter at the Post Office, Berkeley, California.
