ON NORMALOID OPERATORS

I. H. SHETH

ON NORMALOID OPERATORS

I. H. SHETH

The purpose of the present paper is to extend an earlier theorem of the author's on hyponormal operators to the following, on normaloid operators.

THEOREM. *Let N be an operator such that $N - zI$ is normaloid for all complex values of z . If $AN = N^*A$, for an arbitrary operator A , for which $0 \notin \text{Cl}(W(A))$, then $N = N^*$.*

2. Notations. We consider bounded linear operators defined on a Hilbert space H . As usual, the symbols $s(T)$, $\Sigma(T)$, $W(T)$ and $\text{Cl}(W(T))$ stand for the spectrum of an operator T , the closed convex hull of $s(T)$, the numerical range of T and the closure of $W(T)$ respectively.

An operator T is said to be normaloid if $\|T\| = \sup\{|z|; z \in s(T)\}$ and hyponormal, if $T^*T - TT^* \geq 0$. It is known that if T is hyponormal, then T is normaloid and $T - zI$ is also hyponormal for all complex numbers z .

When the original version of this paper was submitted, the referee told me of [3] then existing as a preprint and this makes possible the following shorter proof.

Proof of Theorem. Since $AN = N^*A$ and $0 \notin \text{Cl}(W(A))$, $s(N)$ is real [3]. Also $\Sigma(N) = \text{Cl}(W(N))$ for such a normaloid operator N [1]. Hence $\text{Cl}(W(N))$ is real. This completes the proof of theorem.

The corresponding result for hyponormal operators now follows as corollary from this theorem and the remark made above.

The author expresses his thanks to Prof. U. N. Singh and the referee for their comments and suggestions.

The Supporting Institutions listed above contribute to the cost of publication of this Journal, but they are not owners or publishers and have no responsibility for its content or policies.

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be in typed form or offset-reproduced, double spaced with large margins. Underline Greek letters in red, German in green, and script in blue. The first paragraph or two must be capable of being used separately as a synopsis of the entire paper. It should not contain references to the bibliography. Manuscripts, in duplicate if possible, may be sent to any one of the four editors. Please classify according to the scheme of Math. Rev. **36**, 1539-1546. All other communications to the editors should be addressed to the managing editor, Richard Arens, University of California, Los Angeles, California, 90024.

50 reprints are provided free for each article; additional copies may be obtained at cost in multiples of 50.

The *Pacific Journal of Mathematics* is published monthly. Effective with Volume 16 the price per volume (3 numbers) is \$8.00; single issues, \$3.00. Special price for current issues to individual faculty members of supporting institutions and to individual members of the American Mathematical Society: \$4.00 per volume; single issues \$1.50. Back numbers are available.

Subscriptions, orders for back numbers, and changes of address should be sent to Pacific Journal of Mathematics, 103 Highland Boulevard, Berkeley, California, 94708.
