**ADDENDUM TO: "RATIONAL APPROXIMATION OF e^{-x} ON
THE POSITIVE REAL AXIS"**

DONALD J. NEWMAN AND A. R. REDDY

ADDENDUM TO "RATIONAL APPROXIMATION OF e^{-x} ON THE POSITIVE REAL AXIS"

D. J. NEWMAN AND A. R. REDDY

Our aim in this addendum is to improve Theorem 3 of Newman and Reddy (*Pacific J. Math.*, **64** (1976), 227-232). We also take this opportunity to correct some misprints occurring in Theorem 6 of the above paper. For convenience we refer the above note to [1]. We follow here notation and numbering as in [1].

THEOREM 3*. $\lambda_{0,4n}^*(e^{-x}) \leq 4n^{-4}, n \geq 1.$

Proof. It is easy to verify that $1 + x + x^2/2! + x^3/3! + x^4/4!$ has zeros only in the left hand plane. As far as we know this is the largest partial sum of e^x which has zeros only in the left half plane. Now using this in the proof of Theorem 3 of [1] instead of $1 + x + x^2/2!$, and by following the same approach we can get the required result.

We would like to point out now that the cases $n = 1, 2, 3$ of Theorem 5 follows from (12) and (14).

In the proof of Theorem 6 of [1], the following changes are necessary.

Change $\frac{v^2}{2}$ to $\frac{v^2}{2.25}$, $\frac{1}{\binom{2m}{m}\sqrt{m}}$ to $\frac{1.9}{\binom{2m}{m}\sqrt{m}}$, and $\frac{n}{\sqrt{m}}$ to $\frac{(1.9)n}{\sqrt{m}}$.

Then we get for all $n \geq 8$, $\epsilon \geq e^{-5n^{2/3}}$. By choosing $A = 3n^{2/3}$, $m = [n^{2/3}]$, we get for $1 \leq n \leq 7$, $\epsilon \geq e^{-5n^{2/3}}$.

The Supporting Institutions listed above contribute to the cost of publication of this Journal, but they are not owners or publishers and have no responsibility for its contents or policies.

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be in typed form or offset-reproduced (not dittoed), double spaced with large margins. Underline Greek letters in red, German in green, and script in blue. The first paragraph or two must be capable of being used separately as a synopsis of the entire paper. Items of the bibliography should not be cited there unless absolutely necessary, in which case they must be identified by author and Journal, rather than by item number. Manuscripts, in duplicate, may be sent to any one of the four editors. Please classify according to the scheme of Math. Reviews, Index to Vol. 39. All other communications should be addressed to the managing editor, or Elaine Barth, University of California, Los Angeles, California, 90024.

100 reprints are provided free for each article, only if page charges have been substantially paid. Additional copies may be obtained at cost in multiples of 50.

The *Pacific Journal of Mathematics* is issued monthly as of January 1966. Regular subscription rate: \$ 72.00 a year (6 Vols., 12 issues). Special rate: \$ 36.00 a year to individual members of supporting institutions.

Subscriptions, orders for back numbers, and changes of address should be sent to Pacific Journal of Mathematics, 103 Highland Boulevard, Berkeley, California, 94708.
