## CONSTANT MEAN CURVATURE SURFACES ON A STRIP

AI NUNG WANG

**For bounded planar domains there is a notion of extremal domain for which the constant mean curvature equation  $\operatorname{div}(Du/\sqrt{1+|Du|^2}) = 2$  has a unique solution under no boundary conditions whatsoever. Extending to unbounded domains, it was expected that an infinite strip of unit width has the analogous property of admitting only cylinders as solutions. We show here that in fact other (distinct) solutions can appear.**

The idea is to construct a super-solution  $\operatorname{div}(Dv/\sqrt{1+|Dv|^2}) < 2$  and a subsolution  $w \leq v$  with the same boundary values on the strip  $\Omega = \{(x, y) \mid -\frac{1}{2} \leq y \leq \frac{1}{2}\}$ . Implicitly we describe the function  $w = w(x, y)$  by a parametric surface

$$\begin{aligned}x &= \xi - \frac{1}{2}(1 - \cos \theta) \frac{\xi}{\sqrt{1 + \xi^2}}, \\y &= \frac{1}{2} \sin \theta, \\z &= \frac{1}{2}\xi^2 + \frac{1}{2}(1 - \cos \theta) \frac{1}{\sqrt{1 + \xi^2}},\end{aligned}$$

which is a parabolic trough with semi-circular cross section. Clearly its mean curvature  $> 2$  and a moment reflection shows that it is a graph. Also the two boundary curves are congruent and have curvature  $\leq 1$ . Therefore the parabolic cylinder containing these two curves is the required super-solution  $v$ .

The author would like to express his gratitude to Mr. Jenn-Fang Hwang for bringing this problem to his attention.

### REFERENCES

For an affirmative result under extra boundary condition, the reader is referred to:

---

Mathematical papers intended for publication in the *Pacific Journal of Mathematics* should be in typed form or offset-reproduced (not dittoed), double spaced with large margins. Please do not use built up fractions in the text of the manuscript. However, you may use them in the displayed equations. Underline Greek letters in red, German in green, and script in blue. The first paragraph must be capable of being used separately as a synopsis of the entire paper. In particular it should contain no bibliographic references. Please propose a heading for the odd numbered pages of less than 35 characters. Manuscripts, in triplicate, may be sent to any one of the editors. Please classify according to the 1980 *Mathematics Subject Classification* (1985 *Revision*) scheme which can be found in the December index volumes of *Mathematical Reviews*. Supply name and address of author to whom proofs should be sent. All other communications should be addressed to the managing editor, or Elaine Barth, University of California, Los Angeles, California 90024-1555-05.

There are page-charges associated with articles appearing in the Pacific Journal of Mathematics. These charges are expected to be paid by the author's University, Government Agency or Company. If the author or authors do not have access to such Institutional support these charges are waived. Single authors will receive 50 free reprints; joint authors will receive a total of 100 free reprints. Additional copies may be obtained at cost in multiples of 50.
